

Payments made easy with the leading
PCI-validated solution built inside
Microsoft Dynamics 365 Business Central.

ChargeLogic provides a secure, turnkey solution for accepting payments for phone and mail orders, retail, and e-commerce. Our approach to easy, secure, and reliable payment processing helps you stay focused on your business.

ChargeLogic Payments for Dynamics 365 Business Central

ChargeLogic Payments brings payment processing directly inside **Dynamics 365 Business Central**. Through this integration, you get authorization approvals at the time an order is placed. The system automatically captures funds when an order is shipped and invoiced.

For repeat customers, **ChargeLogic Payments** automatically authorizes the assigned default credit card when an order is released to the warehouse. You can set up customers so that no extra steps are necessary to receive credit card payments. ChargeLogic automatically authorizes and settles at the right time.

Security and Compliance

ChargeLogic Payments is PCI validated and routinely undergoes lengthy audits regulated by the PCI Security Standards Council. ChargeLogic encrypts and tokenizes sensitive customer account information, while still allowing recently used credit cards to be on file for easy reference.

ChargeLogic provides Address Verification Services and Card Verification Value matching as well as a Fraud Protection Suite to help identify risky transactions before an order is shipped. ChargeLogic offers advanced research functionality such as instant transaction retrieval by date and card number in order to protect merchants against possible chargebacks. You can be confident that your customers' data is safe and that your business is protected.

Payment Processing Simplified

ChargeLogic Payments offers a transparent rate structure that includes the software and payment processing. With no limits on users, you can enable the entire team or select individuals to accept credit card payments. Our services include credit card tokenization for added security, compliance, and omnichannel payments. You also have 24x7 access to all processing data, reporting tools, and dispute management.
