

# From spreadsheet mess to ERP success!

Managing and updating item catalogs and pricing information can be a daunting task, especially when dealing with diverse supplier formats. The Dynavision Advanced Item & Price Import app streamlines this process, allowing you to import Excel or CSV files directly into Business Central without the need for manual data manipulation.

## Challenges addressed

- Suppliers often provide data in various formats, leading to time-consuming manual adjustments and potential errors.
- Hand-keying data increases the risk of inaccuracies, affecting inventory management and pricing strategies.
- Regularly updating item and price information can be labor-intensive, diverting resources from core business activities.
- Setting up data exchange definitions or using external tools for data mapping can be cumbersome.

## Requirements Covered in Business Central Projects

- Directly import supplier data into Business Central without the need for intermediate file conversions or external tools.
- Support for various Excel and CSV file structures, including multiple headers, worksheets, and mixed data groups.
- Map supplier fields to Business Central attributes, product names, descriptions, and prices effortlessly.
- Automatically align supplier units of measure with your system to ensure consistency and accuracy.

## Key features

- **Direct Import Functionality:** Import item catalogs and vendor price lists in their original formats without adjustments.
- **Comprehensive Field Mapping:** Easily map and transform supplier data fields to match your Business Central setup.
- **Unit of Measure Mapping:** Ensure consistency by aligning supplier units with your internal standards.
- **Calculated Columns Creation:** Perform on-the-fly calculations during import to generate new data columns as needed.
- **Automated Price Updates:** Import new purchase prices and automatically conclude previous pricing periods to maintain up-to-date records.
- **Data Transformation and Validation:** Apply rules during import to ensure data accuracy and integrity.
- **Support for Complex File Structures:** Handle files with multiple headers, worksheets, and data groupings seamlessly.
- **Multi-Table Data Conversion:** Convert single rows of imported data into multiple related tables within Business Central.
