

The New World of Work and How AP Automation Has Adapted

White Paper

Build a High-Performance Finance Team with Modern Technology

By the year 2025, Global Workplace Analytics estimates that 36.2 million workers will still be working from home. This is approximately 22% of the American workforce. In addition, on average, those who work from home spend 10 minutes less per day being unproductive, they tend to work one more day per week, and they are 47% more productive compared to when they went into an office*. There is no question – work from home is the future.

Think about it – if a potential accounts payable or finance employee is given the choice between two companies – one that requires in-office work, invoice data entry into the ERP system, and highly manual processes, and one that allows work-from-home with high-end technology and automation to streamline basic and complex work functions. There is no question. The high-tech, modern company will win every time.

This example shows that a company that invests in their employees' satisfaction will gain higher value employees that work smarter, not harder and they produce more, making the company more competitive in their market. It's a win for everyone, especially in a workforce and society that focuses on the best of the best.

Digital-First & The New Normal

Because of the new work-from-anywhere and digital-first mindset of the workforce, things change faster than ever.

Companies and employees have adapted to work smarter, not harder, which means that digital transformation is no longer a choice. It is a necessity.

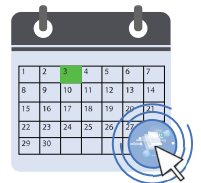

In order to remain competitive, companies need more than invoice capture and lightweight workflow that have multiple steps to get invoices into the ERP. They need artificial intelligence and machine learning that make their entire accounts payable process nearly touchless, so their finance teams can focus on high-priority and high-value work. The market demand and digital-first, cloud-first mindset have changed the way we think about AP automation; it is important to get solutions into the hands of people who need it, in a way that works best for them.

AI OCR eliminates
data entry

Affordable AP
automation for all

Invoice processing
setup in 1 day

Furthermore, smaller and mid-sized organizations that are growing and believe that such solutions are out of reach due to cost or time constraints, can now get started with in a matter of hours, with some solutions even offering a free trial before committing to a subscription.

The Value of Cloud

A powerful AP automation solution is cloud-native and delivers a fast time to solution. This provides a rapid transformation from manual to modern without disrupting business continuity, keeping teams productive and focused – more so than ever before.

Plus, with anywhere, anytime access to the entire invoice process and audit trail, your business could meet regulatory, audit and compliance requirements while improving cash management.

Cloud AP automation can improve more than your invoice workflow. If your organization is facing a labor and resource shortage, AP automation can help you do more with less.

The true value of cloud deployment is that companies can achieve touchless, intelligent invoice processing with a seamless integration their ERP faster than ever before. This rapid time to solution will become the key to success for many finance teams.

Empower your employees to focus on high value work

Provide anywhere access to your entire invoice process and audit trail

Improve vendor relations and maintain business credibility

Always be on the latest release with automatic feature updates

AI-Powered AP Automation from KwikTag

KwikTag by enChoice leads digital transformation as the one system for AI-powered invoice capture and workflow automation. KwikTag helps organizations go paperless with intelligent AP automation and document management with integrations for the Microsoft Dynamics ERP systems.

With 20+ years of experience in the Dynamics community, KwikTag offers AP automation solutions that provide a completely digital, touchless workflow for payables and purchasing related invoices. Our AP automation solutions for Dynamics GP and Business Central are cloud-based and designed using industry standard invoice workflows. AP automation with KwikTag minimizes data entry, saves time and increases efficiency with the ability to get started faster than ever.

With KwikTag, the effect of your digital transformation is instant. Your business will see measurable results such as: paper costs reduced by 90% and invoice processing costs decreased by 80%. The complete KwikTag solution is designed to eliminate paper, save time, and help businesses gain visibility over their entire AP and payment process.
