

Real-Time Supply Chain Locating and Traceability

Need a more efficient way to track assets and inventory moving through your supply chain?

Zebra's ATR7000 real-time location system (RTLS) and Barcom's Transaction™ software enable automated tracking and locating of inventory, equipment, and other assets in real time.

Track assets and inventory on the move or at rest, virtually anywhere in your supply chain.

Optimize Warehouse Operations with RFID RTLS

Get up-to-the-minute access to asset location, condition, and status. Save time and cost

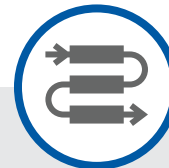

with automated data capture, inventory management, and workflows.

Sort, compile, analyze, and share supply chain information across your entire enterprise.

Gain visibility into your supply chain to enable faster, smarter, and more effective decision-making.

Streamline operations and transform your warehouse, production, and logistics workflows.

Integrate Barcom's Transaction software with your ERP or WMS to easily manage real-time location and asset data.

How the Technology Works

RTLS uses RFID tags, readers, and other sensors to wirelessly track and locate tagged assets and materials using radio frequency waves.

Location and status data is collected and securely transmitted through your network to Barcom's Transaction software, which updates all your RTLS supply chain records.

Transaction communicates with your ERP or WMS to share RTLS information, so you can view and analyze data, share insights, and manage your supply chain more effectively.

Learn More with an RTLS Discovery Call

Contact Barcom today to arrange a discovery call and see what RTLS can do for your business.
